(a) the band is not the sum of its layers
KL(band) / Σ KL(singles)
band width k (layers)
7.5× at k=12
additive prediction
(b) damage tracks width, not contiguity
KL from intact model
layers removed k
contiguous band
strided: span 12, width 6
random k-subset (5 seeds)
width 6
span 12
(c) over-widening destroys identity (size)
object identity kept
intervention width K/k* (log)
K = k*
